

Total Recall

Protect Your Device, Back It Up

Total Recall is a Psion Teklogix utility which maintains the persistence of installed applications and settings over cold reboots of mobile devices. This utility is based on a back-up and restore concept, and is extended to incorporate powerful advanced features such as an easy-to-use profile manager and automatic backup and restore capability. With Total Recall, your applications, device setup and configuration, and data are all protected.

Total Recall has a user-friendly interface. You can easily create a profile of your device, including applications, data, and registry information, and securely back up this profile in flash memory. In case of a cold reboot, the profile will be restored automatically as the device is powered up.

ADVANTAGES

- Administrators can selectively back up files, databases and registry data
- Restoring is simple – automatically restores the backup when the device is powered up
- Built right into the device image to protect against virus attacks that may otherwise corrupt your operating system image, modify your system configuration settings, and corrupt your data
